Kapil Rajput

Software Engineer — Full-Stack (MERN / Next.js)

Noida, Uttar Pradesh, India | kapil.rajput9711@gmail.com | +91 8449111099
Kapil Rajput | Kapil9711 | kapilrajput.dev

SKILLS

FRONTEND

React | Next.js | Redux | React Native | Tailwind CSS

BACKEND

Node.js | Express | REST APIs

DATABASE

MongoDB | Elasticsearch | Redis

CLOUD & DEVOPS

AWS | Docker | Nginx | CI/CD

LANGUAGES

JavaScript | TypeScript

ARCHITECTURE & TOOLS

System Design | Linux | Git | Git Lab | Postman

STRENGTHS

- System Design
- Linux
- Docker
- AWS
- Nginx
- Elasticsearch
- MongoDB
- Performance Optimization
- Documentation
- CI/CD

EDUCATION

B.Tech, Mechanical Engineering

Meerut Institute of Technology, Meerut

PROFESSIONAL SUMMARY

Software Engineer with 2 years of experience building production-scale web and mobile platforms across e-commerce, fintech, and marketplace domains. Experienced in scalable REST APIs, Next.js SSR, React Native, Elasticsearch, Docker, and AWS. Passionate about owning features end-to-end, optimizing performance, writing clean documentation, and building reliable systems used by real business operations.

EXPERIENCE

Software Engineer — Vaayro Technologies

2 Years

Gemlay — Jewellery E-commerce Platform

- Built a production-scale jewellery e-commerce platform serving end customers end-to-end, from catalog to checkout.
- Developed SEO-optimized storefront pages using Next.js server-side rendering (SSR), improving discoverability and load performance.
- Implemented Elasticsearch-powered product search with filtering and ranking to deliver fast, relevant results.
- Designed and maintained scalable REST APIs powering the storefront, admin panel, and internal services.
- Built a comprehensive Admin Panel covering Products, Orders, Inventory, Coupons, Notifications, Users, CMS, and Analytics.
- Optimized MongoDB queries and indexing strategy to reduce response times under production load.
- Improved front-end performance through lazy loading, dynamic imports, image optimization, and caching.
- Participated in architecture discussions and authored engineering documentation for core modules.
- Owned Docker-based deployment on AWS with Nginx as reverse proxy.

Next.js | Elasticsearch | MongoDB | Docker | AWS | Nginx

Bullion Management Platform

- Developed an Admin Panel, client website, and mobile app for a bullion trading and inventory management business.
- Built inventory and trading modules supporting real-time price updates and stock tracking.
- Implemented role-based access control (RBAC) and secure authentication across web and mobile clients.
- Designed REST APIs powering real-time updates and push notifications across platforms.
- Containerized services with Docker for consistent deployment.

REST APIs | RBAC | Real-time Updates | Docker

Karigar Platform

- Built worker registration and hiring workflow with admin approval steps and profile verification.
- Developed an admin dashboard and mobile app enabling end-to-end management of worker onboarding.
- Designed backend APIs powering registration, approval, and notification flows.

Backend APIs | Mobile App | Notifications
